

# MAP SKILLS

# LESSON 9

NAME \_\_\_\_\_

Once upon a time, figuring out the distance between two points involved a map and using its scale measurements. Today, with satellites and mobile devices, it's as easy as using your location and typing in where you want to go. This type of precision makes planning trips and commutes easier, although calculating travel time is still tricky due to issues like weather, traffic, and stops.

For this activity, use a map app, like Google Maps or Map Quest. Enter a starting location and pick an ending location to calculate distance.

START	END	DISTANCE
_____	_____	_____
_____	_____	_____
