

COMPARE/CONTRAST

LESSON 20

NAME _____

Nicky Explains

When you compare two or more things, you should look at the big picture and also the small details for things that are the same. When you contrast, you are focusing on all of the differences. The easiest way to do this is to close your ideas and think carefully and then make a list.

New Jersey has hundreds of school districts of all different sizes. Some districts have dozens of schools while others have one small school. Use the chart to compare and contrast large and small schools.

Small School

COMPARE (the same)

Large School

Small School

CONTRAST (different)
